

A Sustainable Future for Ocean Best Practices

CONTACT: OCEANBESTPRACTICES@IODE.ORG

Acknowledgements:

This project has received funding from the European Union's Horizon 2020 program under grant agreement No 633211 (AtlantOS) and from NSF under grant 1143683 (the NSF Ocean Research Coordination Network). IODE also provided support for this development.

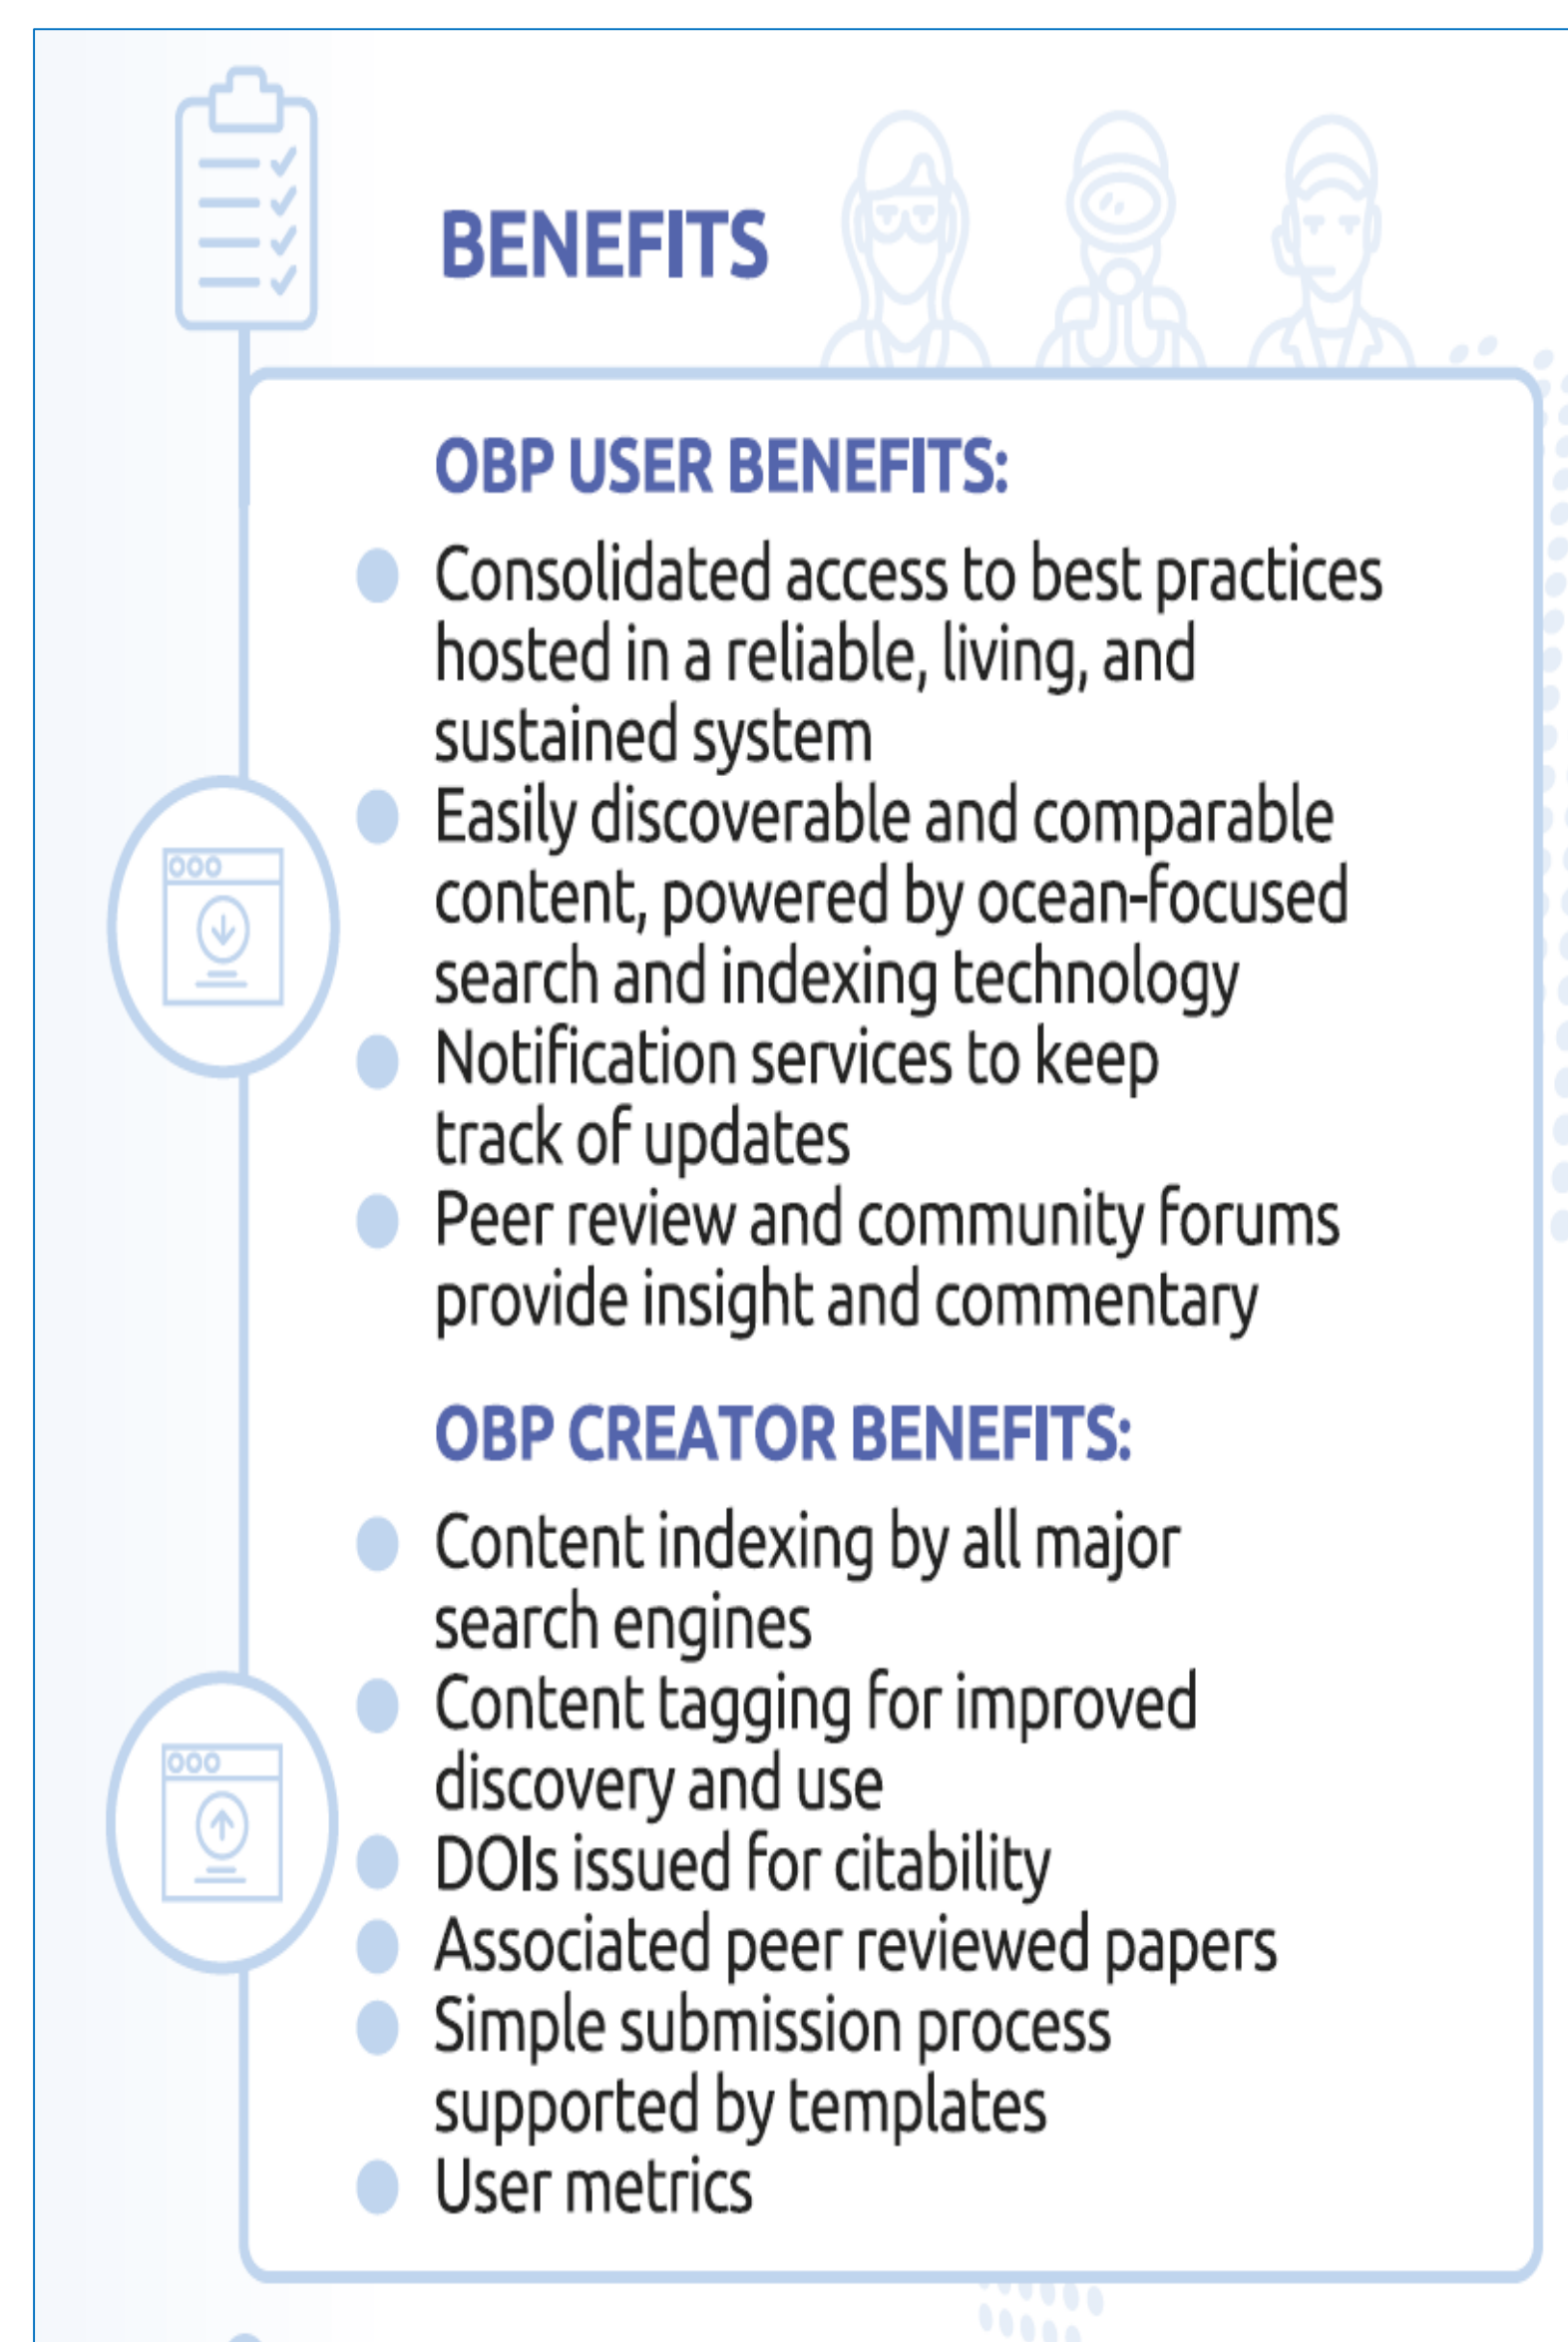

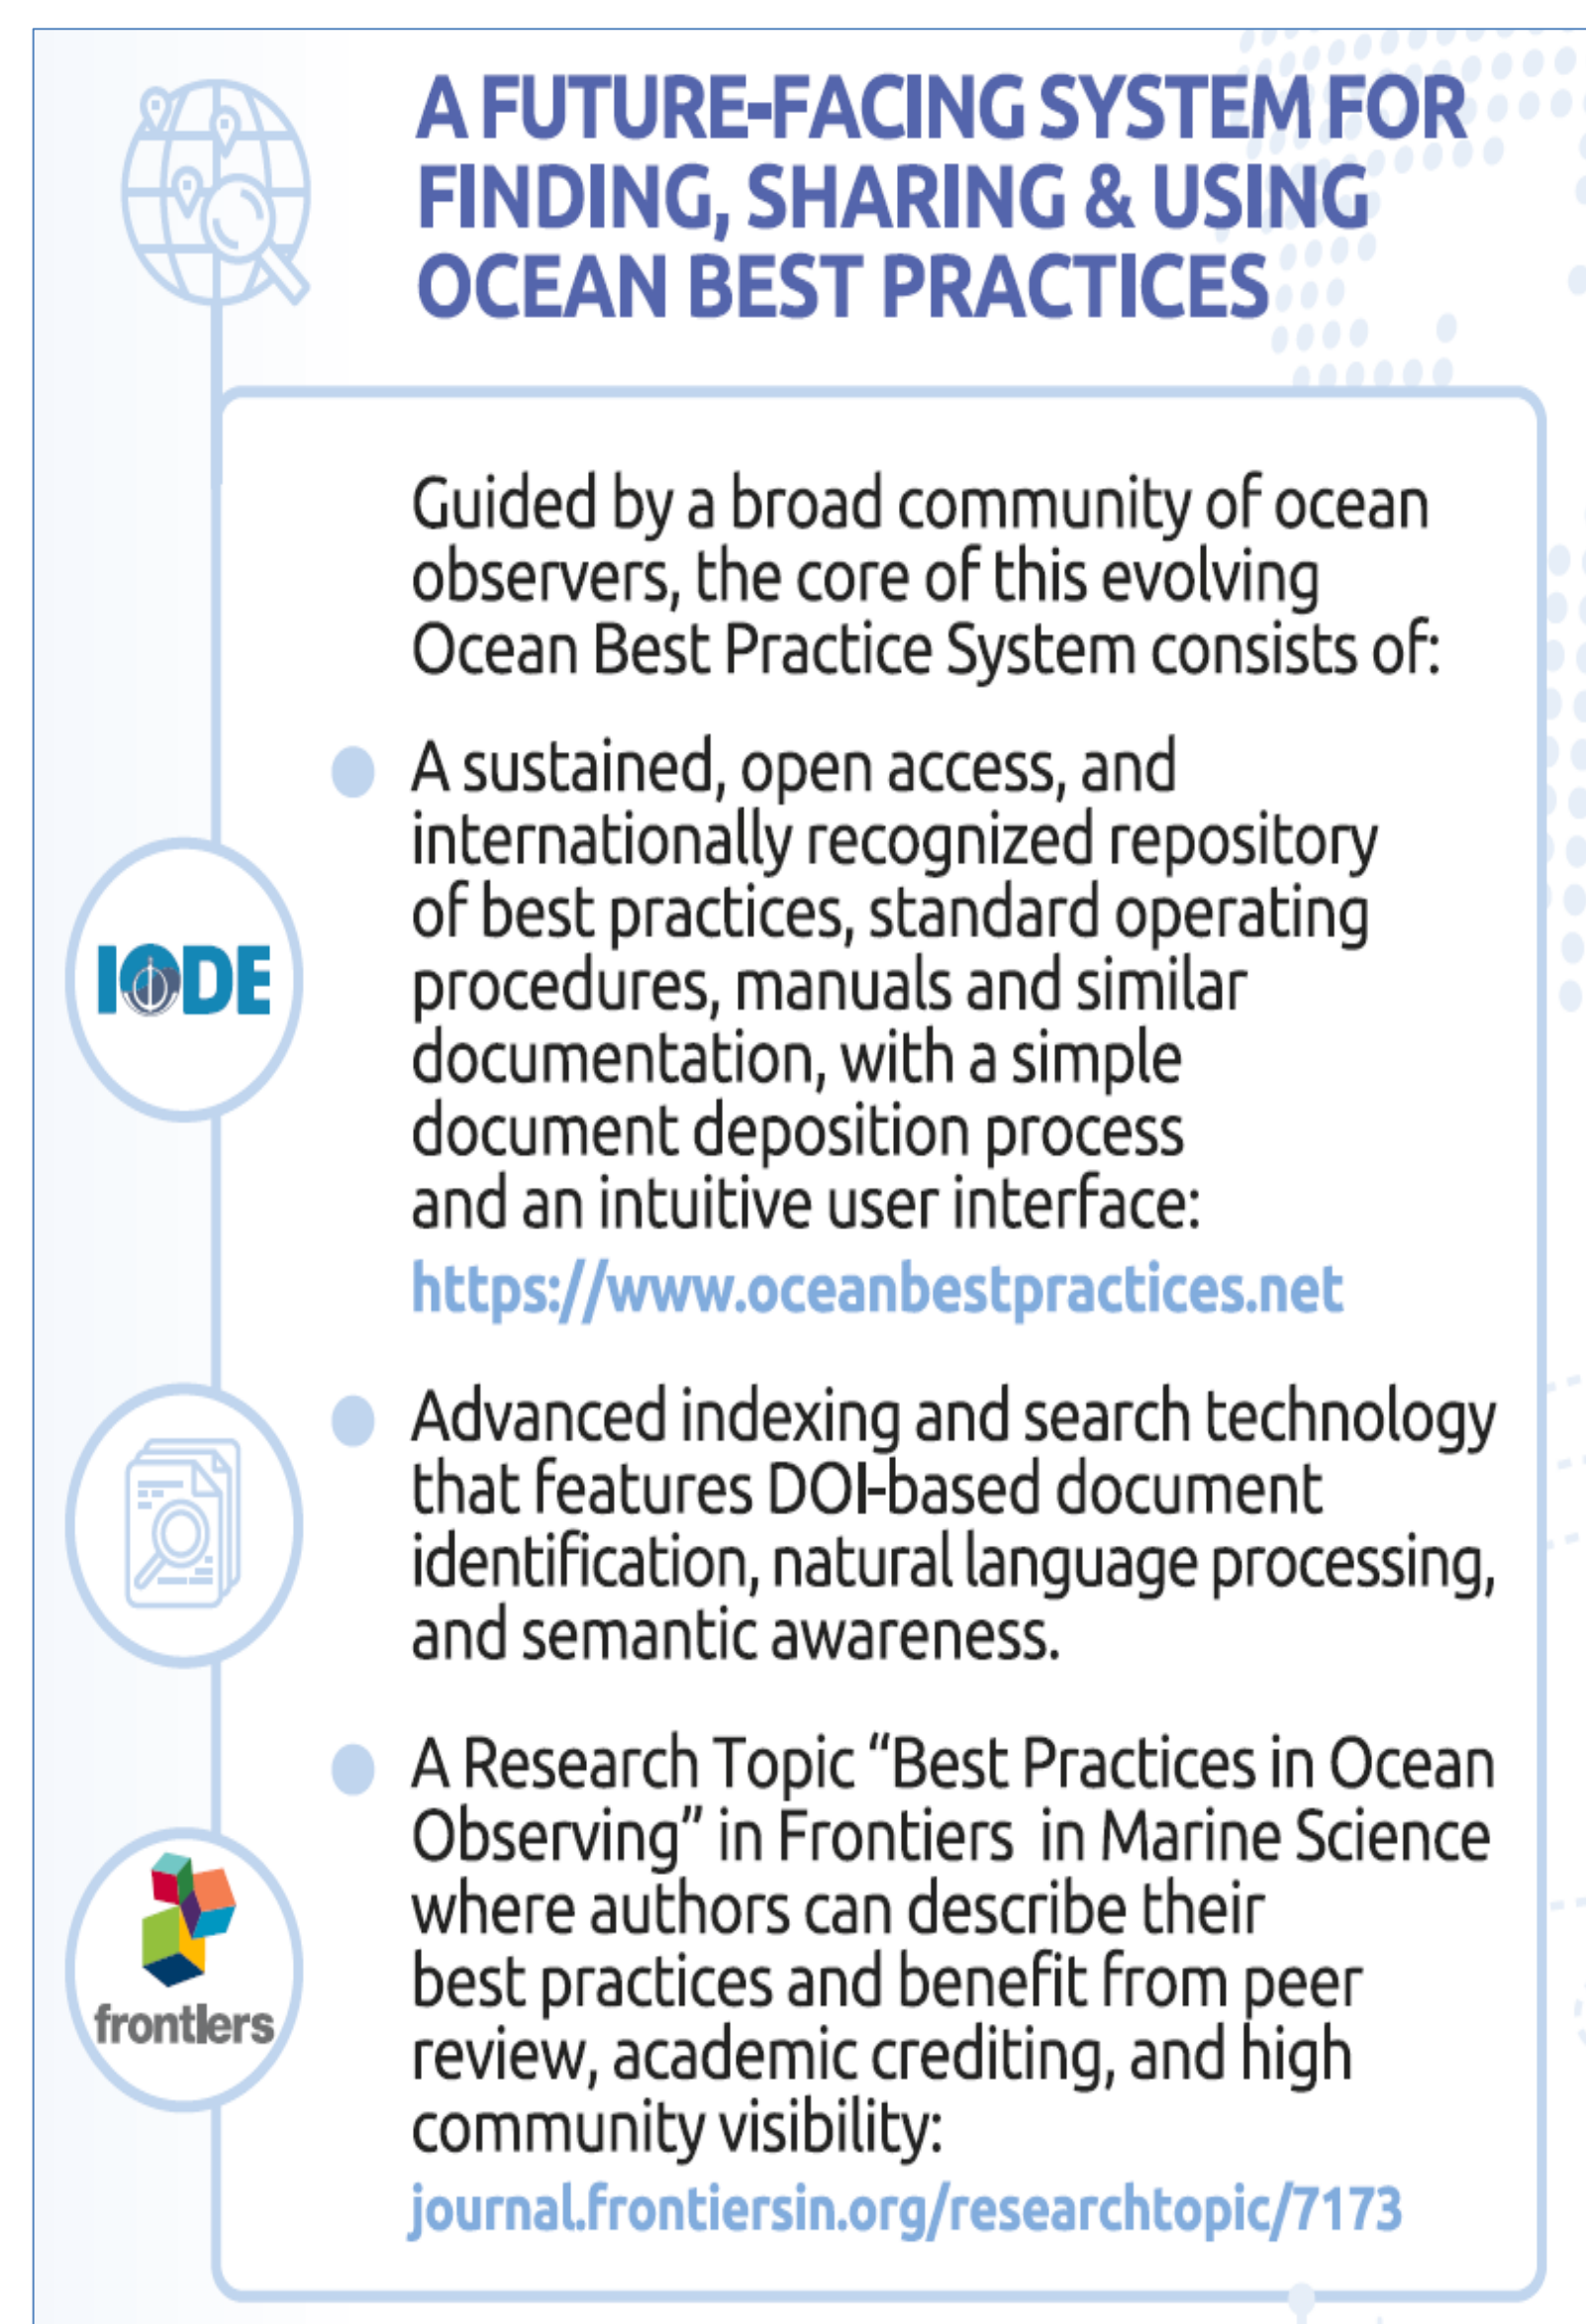

Ocean Best Practices System: Knowledge Exchange for Practitioners

COMMUNITY OCEAN BEST PRACTICES

A community best practice is a methodology that has repeatedly produced superior results relative to other methodologies with the same objective. To be fully elevated to a best practice, a promising method will have been adopted and employed by multiple organizations.

OCEAN BEST PRACTICES SYSTEM (OBPS) COMPONENTS

The OBPS sustains best practices on observations, data management, QA/QC, data analyses and applications.

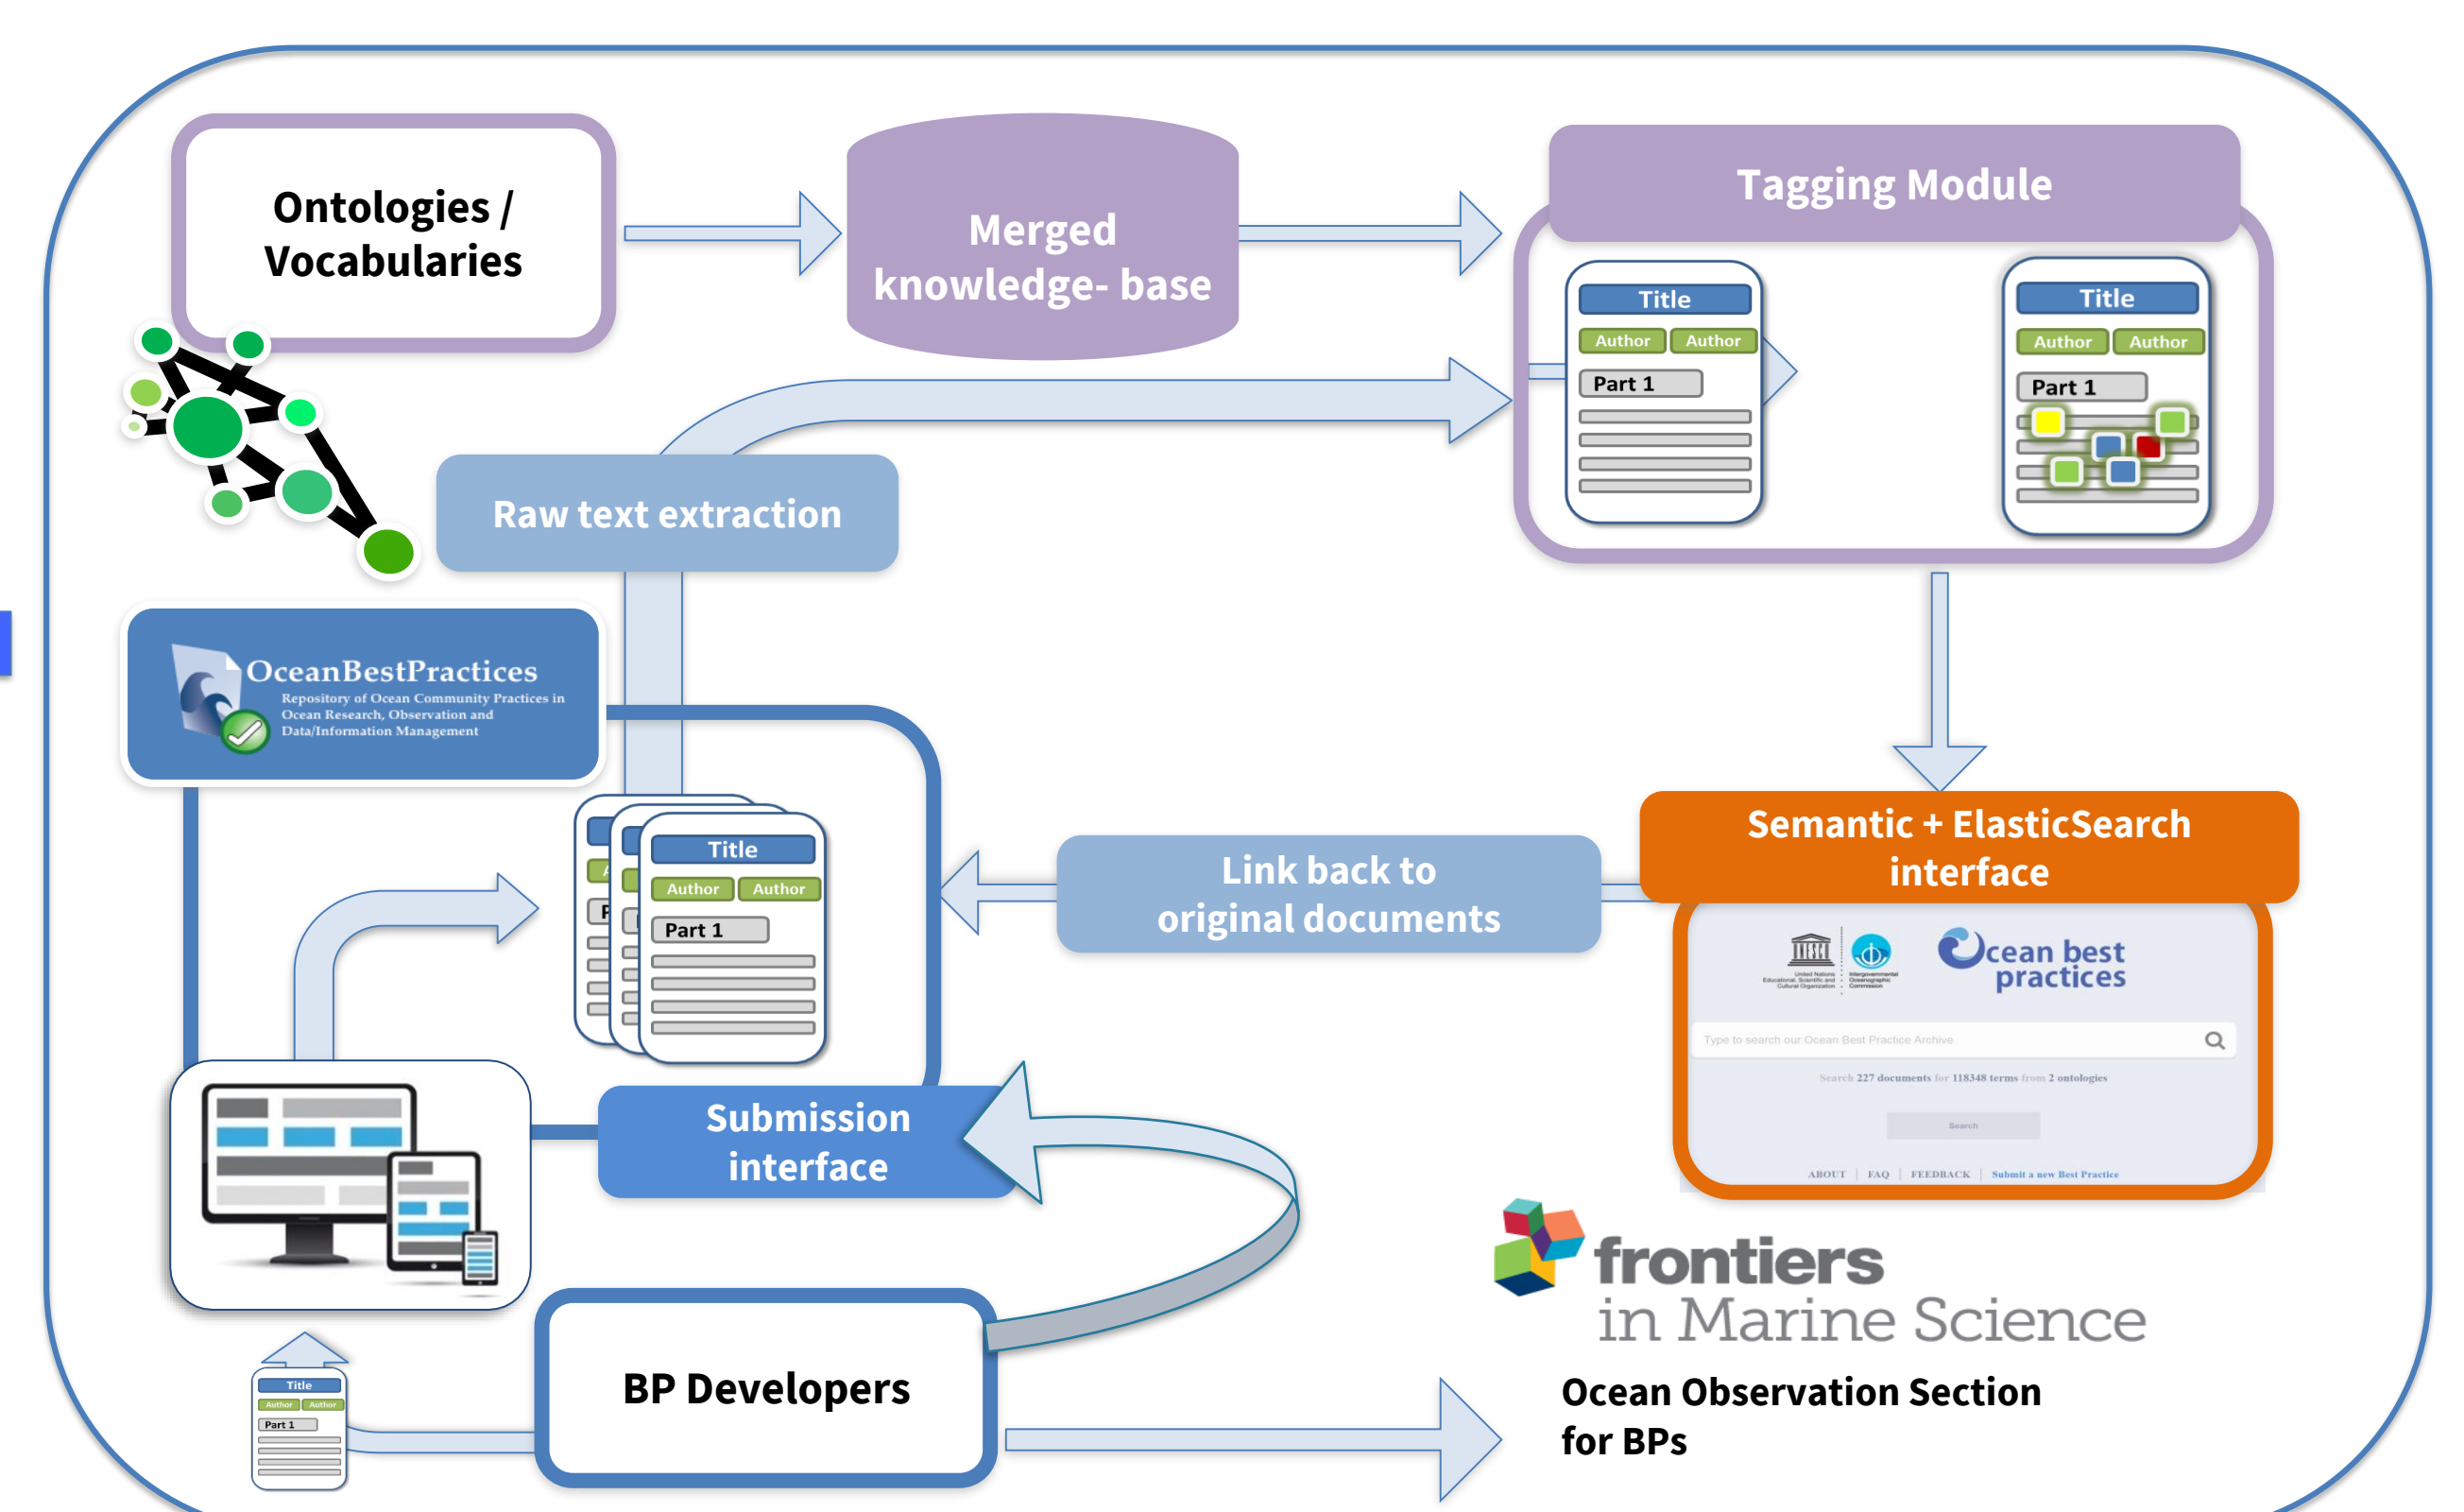

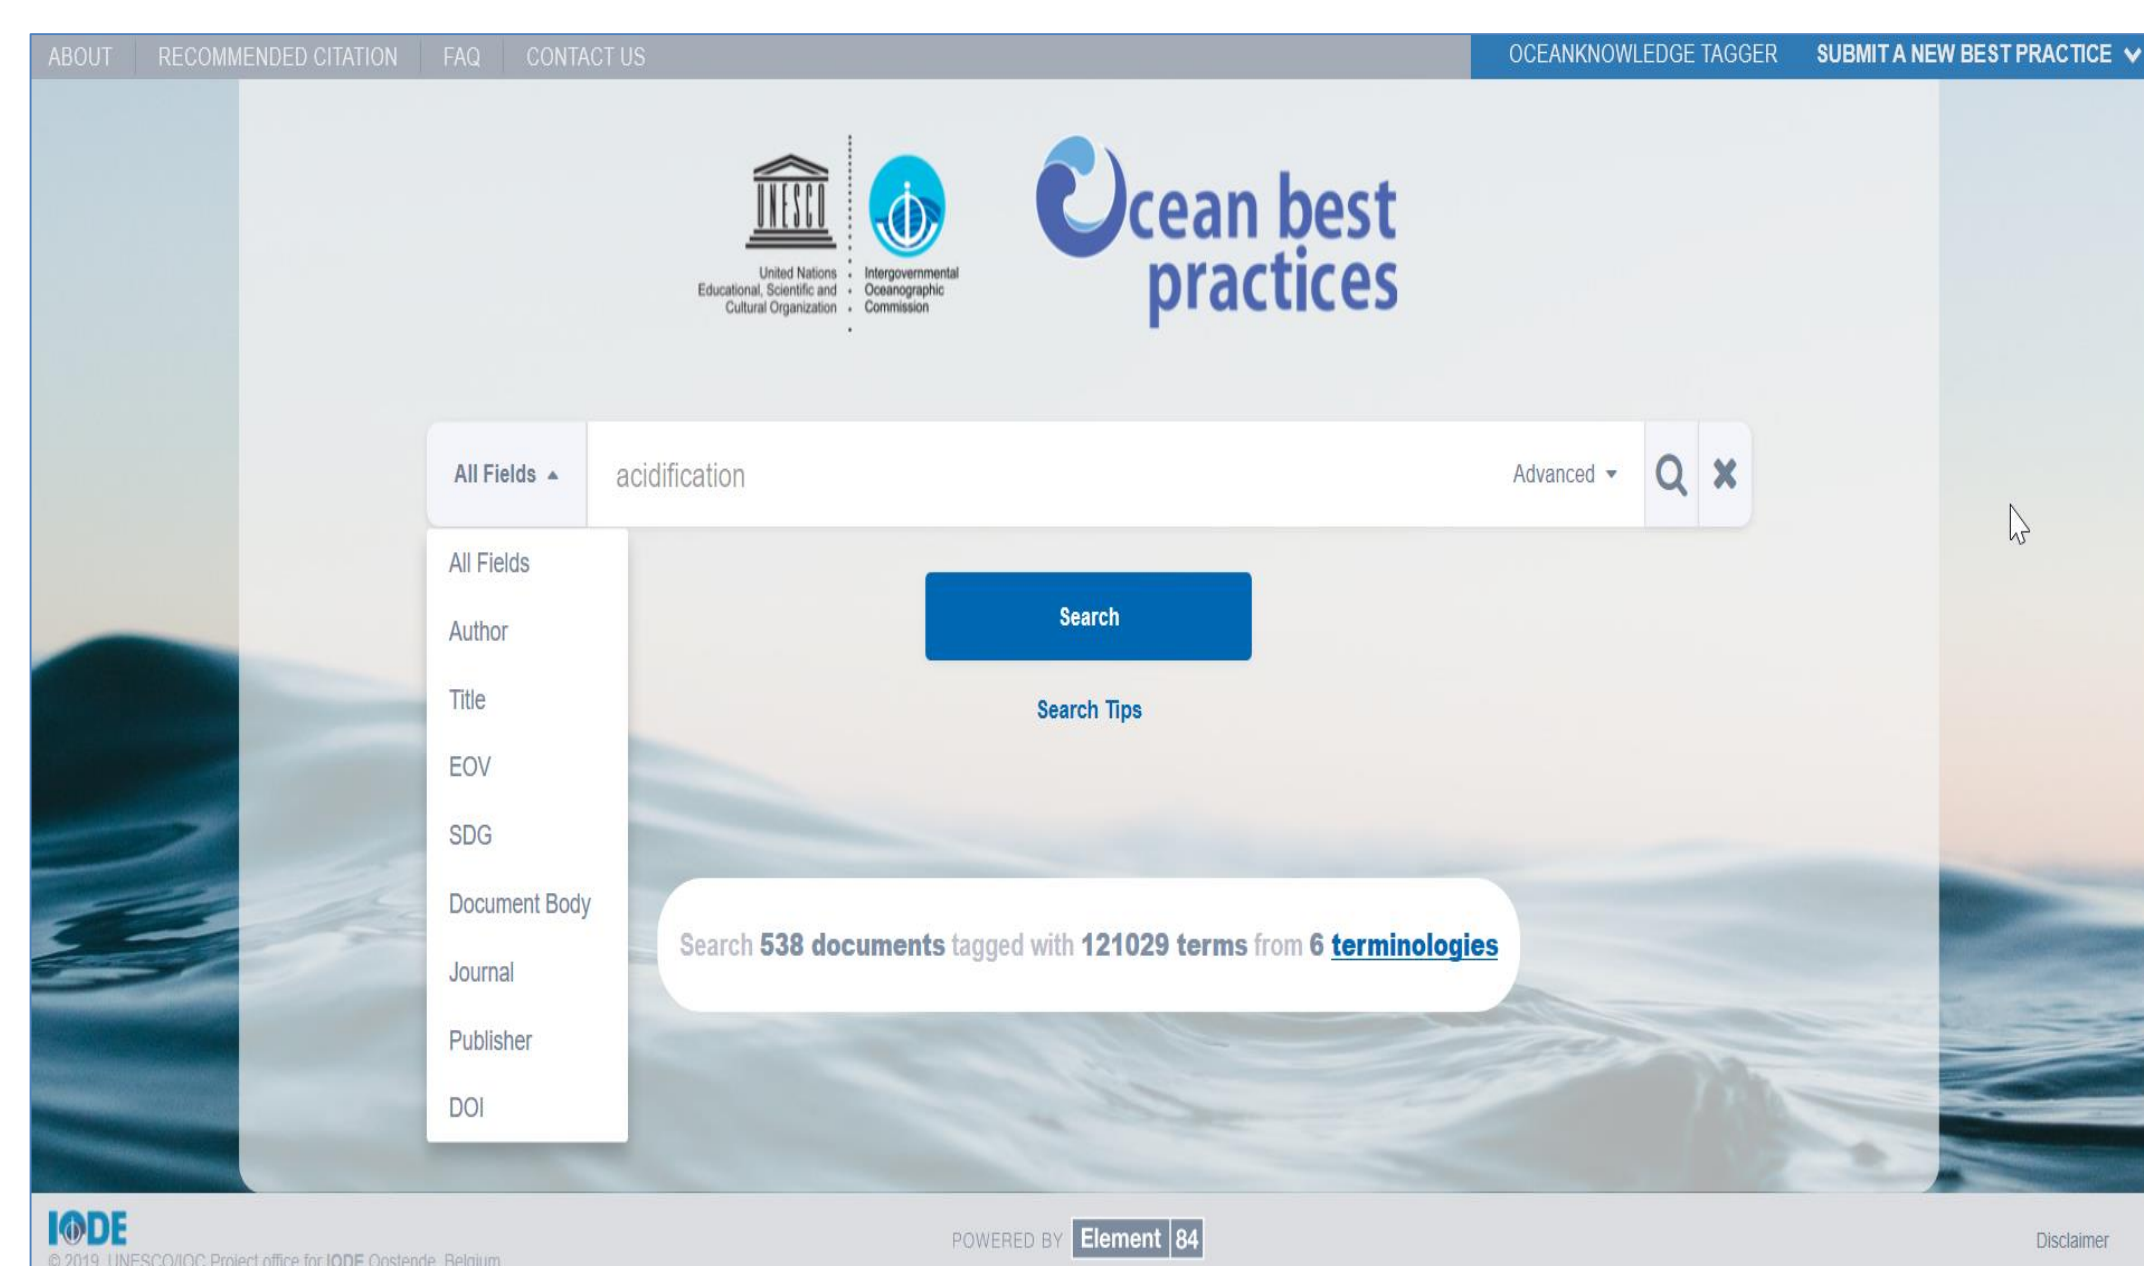

OBPS ADVANCED TECHNOLOGIES

We have applied natural language processing and ontologies to link best practices to a common, machine readable knowledge model for improved interoperability. We are enhancing this prototype to give users more intuitive tools to discover best practices related to their environment, chemical compound, or sensor of interest.

WWW.OCEANBESTPRACTICES.ORG

The OBPS repository at IODE is enhanced with state-of-the-art semantic discovery and metadata indexing for improved access to best practices and the data associated with them.

OCEAN BEST PRACTICES WORKING GROUP

Frontiers publishes a peer review Research Topic "Best Practices in Ocean Observing"
