

Evolving and Sustaining Ocean Best Practices

EarthCube Technology & Architecture Committee Conference Call
Thursday, May 3, 2018 4:30pm EDT

Mark Bushnell
National Coordinator, US IOOS/QARTOD

Best Practice Working Group:

M. Bushnell, P.L. Buttigieg, J. Hermes, E. Heslop, J. Karstensen,
F. Muller-Karger, C. Muñoz, F. Pearlman, J. Pearlman, P. Simpson

QARTOD

QUALITY ASSURANCE/QUALITY CONTROL OF REAL-TIME OCEANOGRAPHIC DATA

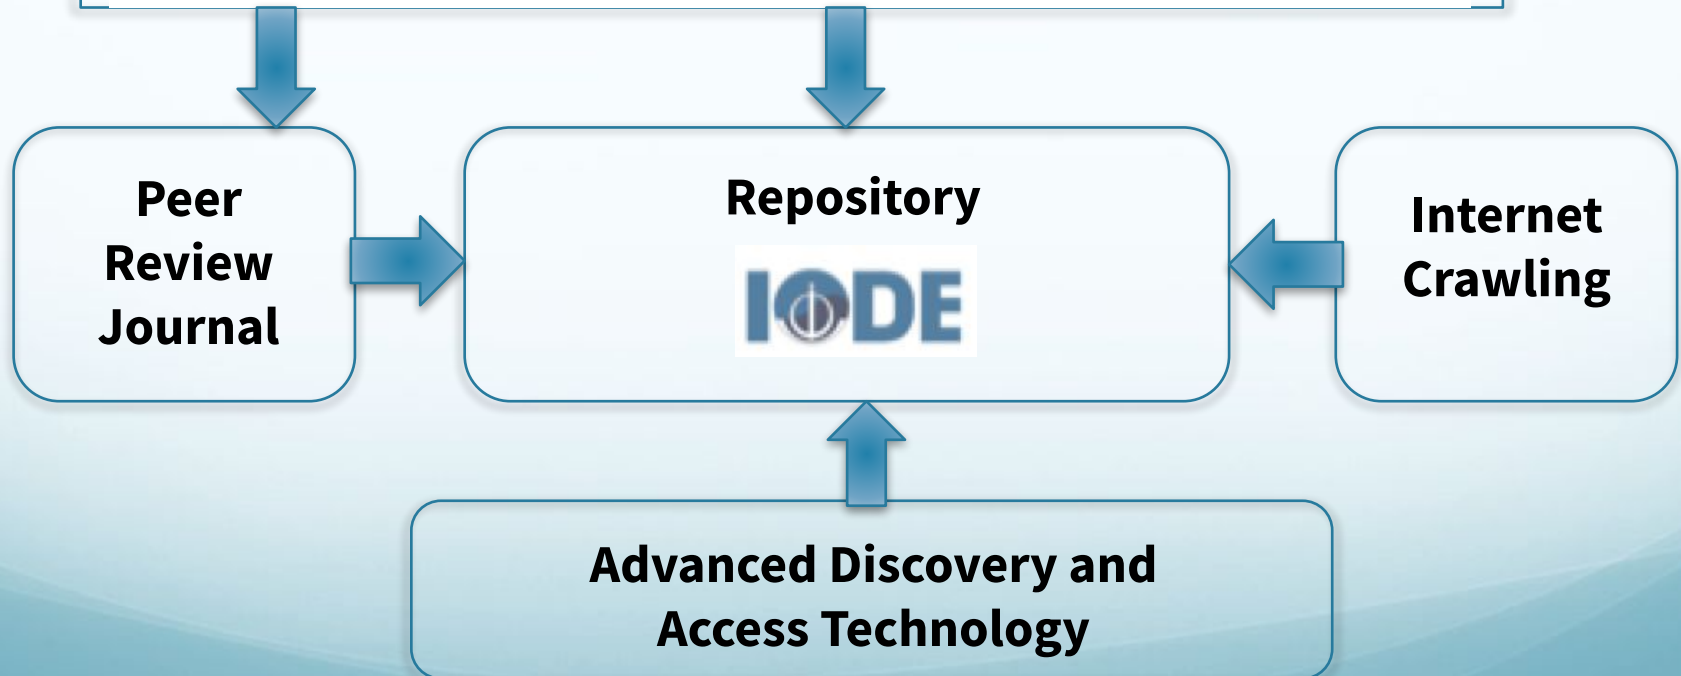

Challenges of Best Practices (BP)

- Large investments in high quality measurements
- Quality of BP Documentation varies widely
- Data and metadata formats are inconsistent
- Machine readability is limited (if at all)
- Sustainability is often not guaranteed

Participating Organizations and Programs

Best Practice System

- Expand IODE repository capabilities
 - Expand Permanent IDs through DOI, ORCHID
 - Implement Natural Language search drawing on marine vocabularies; compatibility with machine readability
 - Internet Crawling as inputs of additional practices
- Alignment with FAIR principles and open operations
- Introduction of community peer review including Research Topic in Frontiers in Marine Science

“Research Topic”

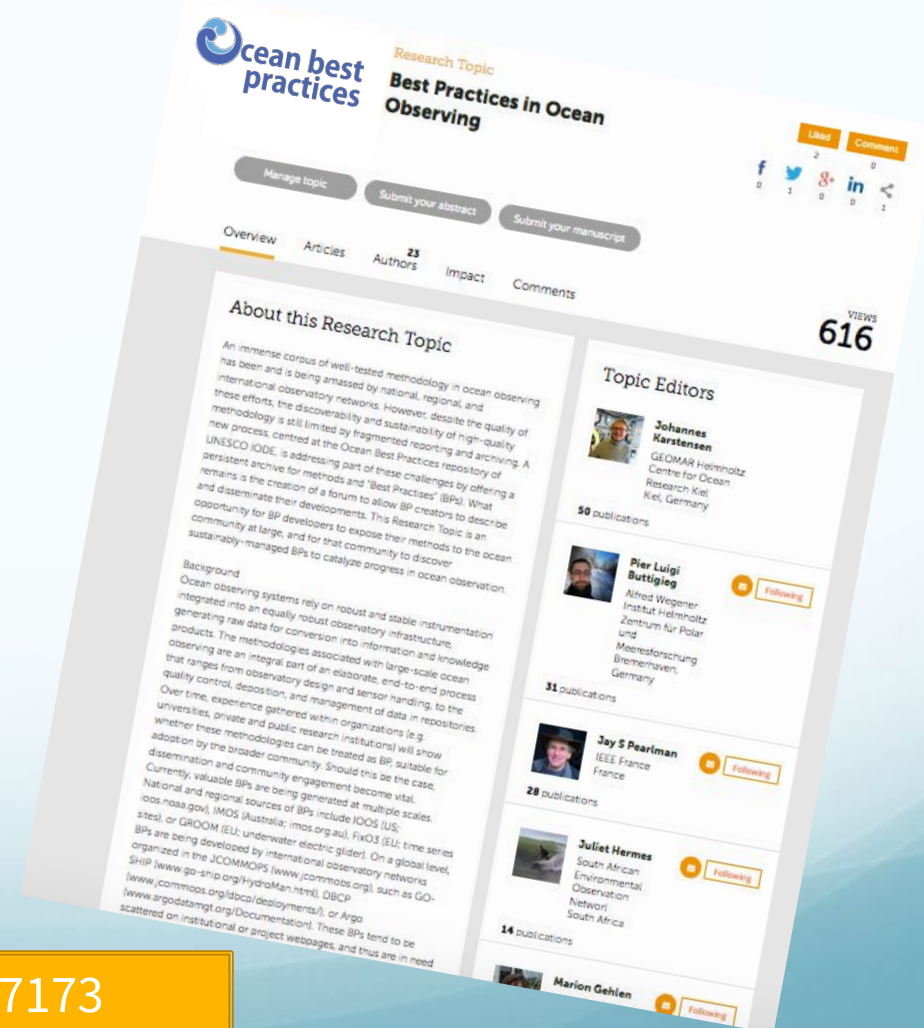

Best Practices in Ocean Observing

frontiers

- Well recognized journal
- Open Access
- Affordable
- Linkable to BP repository
- Provision of a forum opportunity for dialogue
- Broad participation in BP reviews
- **1st submission deadline: 15. April 2018**
- **2nd submission deadline: 15. September 2018**

www.frontiersin.org/research-topics/7173

Benefits

- Greater Interoperability across disciplines, programs and institutions
- Living, Sustained, Comprehensive System for Ocean Observing Practices
- Academic recognition through peer review
- Improved visibility from search engines
- Training resource

How can your Community engage?

- Contribute best practices to the Repository*
- Publish in the “Best Practices in Ocean Observing” Research Topic in Frontiers**
- Use best practices in training and in the field

GOOD, BETTER AND BEST

A Newsletter for Practices of Ocean Observing & Applications

Issue 1: April 2018

WELCOME TO THE FIRST ISSUE!

This monthly newsletter shares information about new developments in Ocean Best Practices and the [Ocean Best Practice System \(OBP-S\)](#).

So, what is a best practice? We have been debating this a long time and last year, a workshop sponsored by the Best Practice Working Group settled on a definition:

"A community best practice is a methodology that has repeatedly produced superior results relative to other methodologies with the same objective. To be fully elevated to a best practice, a promising method will have been adopted and employed by multiple organizations."

Why do we need or use best practices? They help document methods for making measurements, archiving data and supporting applications. Best practices improve the reproducibility of science research, improve interoperability across disciplines and support community expansion for training and capacity building.

How is the OBP-S progressing?

Community outreach has played a big role in its requirements and implementation. A workshop of experts was held at IOC, Paris, in November 2017 that produced many excellent recommendations. The results are given in [proceedings](#):

- ✓ The BPWG has also achieved milestones in the last two months. The Repository has grown to 250 best practices and we are halfway to our long-term goal of 500.
- ✓ A pilot for an upgraded user portal has been created. It will start beta testing soon.
- ✓ A semantic-based search and document tagging capability has been developed and will be expanded using natural language processes.
- ✓ The OBP Repository started issuing DOIs in March to improve discoverability on the web.
- ✓ A research Topic, [Best Practices in Ocean Observing](#), in the *Frontiers in Marine Sciences* is receiving papers for peer review and publication. Four abstracts were received last month.

OUR MISSION

Create and implement a comprehensive, sustainable, easy to use Best Practices system for the ocean research and applications community. This includes:

- A sustained, open access, and internationally recognized repository with advanced indexing and search technology, also featuring DOI-based document IDs
- A peer-reviewed *Best Practices in Ocean Observing Research Topic* in *Frontiers in Marine Science*
- Community support for training and capacity building

OUR TEAM

Mark Bushnell, IOOS
Pier Luigi Buttigieg, AWI
Juliet Hermes, SAEON/JCOMM
Emma Heslop, GOOS/JCOMM
Johannes Karstensen, GEOMAR
Allison Miller, SOI
Frank Muller-Karger, Univ S. Florida
Cristian Muñoz, SOCIB
Françoise Pearlman, IEEE
Jay Pearlman, IEEE (**LEAD**)
Lisa Pereira, SOI
Pauline Simpson, IOOE

CONTRIBUTORS/SPONSORS

IOOE, GOOS, JCOMM, AWI,
IEEE, IOOS, SAEON, SOCIB
AtlantOS, INTAROS,
OceanObs RCN, ODIP
